Biofarma Group

Revision of July 24th, 2026

ENVIRONMENTAL POLICY

Biofarma Srl, as a contract manufacturer of various Health Care products, is aware that its activities, products and services may have impacts that could have effects on the natural ecological balance. Therefore, the Company recognizes environmental protection and sustainability as strategic objectives to be considered in all its activities.

Biofarma Srl adopts a proactive approach aimed at achieving a desirable level of environmental, social and economic sustainability. The Company establishes specific principles and objectives for each of the above-mentioned strategic and influencing factors, considering the following to be of fundamental importance:

- maintaining the compliance of its Environmental Management System with applicable legislation and regulatory requirements, with particular reference to Italian Legislative Decree 152/06, as amended and supplemented, the UNI EN ISO 14001 standard, and with customer requirements;
- pursuing sustainable development by placing the utmost emphasis on pollution prevention and limiting the consumption of natural resources;
- implementing a monitoring system for its significant environmental aspects to keep them constantly under control and verify the effectiveness of the measures implemented;
- establishing objectives and defining improvement actions, implementing them through the use of the best available technologies;
- taking prompt actions in the event of deviations in monitored parameters that could potentially compromise environmental quality;
- assessing in advance the environmental impacts of new production processes, taking into consideration their entire life cycle; controlling or influencing, where possible, the way in which the company's products and services are designed, manufactured, distributed, consumed and disposed of, adopting a life-cycle perspective;
- reducing waste generation by reduce waste and optimizing waste management;
- increasing the recovery and recycling of waste and production scraps, with the aim of moving towards a circular economy;
- promoting communication and cooperation with suppliers and customers to reduce indirect environmental and energy impacts, in a framework of continuous improvement;
- motivating, training and involving employees in pursuing the objectives of environmental protection and energy efficiency;
- periodically reviewing system's documentation and this Environmental Policy in order to ensure that they remain appropriate and relevant to changing business conditions.

The company's main environmental objectives are to protect the environment from all categories of pollution while meeting the implicit and explicit requirements of customers and suppliers, and to limit energy consumption through the optimization of the use of its production facilities.
